# PIG CROP REPORT

SEPTEMBER 1956

The expected number of sows to farrow in the fall of 1956 (June 1 - December 1) for 9 Corn Belt States is 8 percent smaller than in 1955, according to the Crop Reporting Board. The number is now estimated at 3,490,000 head for the 9 States--Ohio, Indiana, Illinois, Wisconsin, Minnesota, Iowa, Missouri, South Dakota, and Kansas. This compares with 3,781,000 sows farrowed in the same period of 1955. These States accounted for 68 percent of the United States fall pig crop in 1955. The September survey indicates an increase of 1 percent or 28,000 head from the farrowing intentions reported in June. Farmers in all of the 9 States report smaller fall sow numbers than for 1955, ranging from a 17 percent drop in Kansas to 3 percent fewer sows in Indiana.

Sows farrowed during June, July, and August totaled 1,889,000 head--down 9 percent from 1955 and 17,000 head or 1 percent below the intentions reported for the 9 States in June. These litters represent 54 percent of the estimated fall total compared with 55 percent in 1955. Sows bred to farrow in September, October, and November are now estimated at 1,601,000 head, which is 6 percent below last year, but 3 percent above intentions reported in June.

Reported breeding intentions indicated that the number of sows to farrow from December 1956 through February 1957 for the 9 Corn Belt States will total 1,531,000 head. This would be a decline of 56,000 head or 4 percent from the same period a year earlier. The intentions reports show considerable variation between States, ranging from a 10 percent reduction in Ohio to a 4 percent increase in Illinois.

Continued on page 4

This is the first quarterly pig crop release issued by the Crop Reporting Board. Previously these reports were issued only in the individual States concerned. These surveys are made possible by matching funds provided jointly by State agencies and the United States Department of Agriculture under provisions of the Agricultural Marketing Act of 1946.

Continued from page 1

The number of all hogs and pigs on farms September 1, 1956 in the 9 States totaled 44,873,000 head, down 11 percent from the 50,449,000 on September 1, 1955. Hogs and pigs six months old or over totaled 7,997,000 head, 12 percent less than the 9,057,000 a year earlier. The number under six months of age was 11 percent less than last September, with the sharpest drop occurring in the 3 - 6 months age group--a decline of 13 percent for this group, compared with only a 6 percent drop in the number of pigs under three months old. The decline in the number of pigs under three months of age was 3 percentage points less than the decline in the number of sows farrowing during the June 1 - September 1 period, reflecting an increase in the number of pigs saved per litter. The 13,074,000 pigs under three months old on farms September 1 made up 29.1 percent of all hogs, compared with 13,902,000 pigs under three months of age which made up 27.6 percent of all hogs on September 1 last year. Pigs 3-6 months of age totaled 23,802,000 head compared with 27,490,000 a year earlier.
